The new frontline

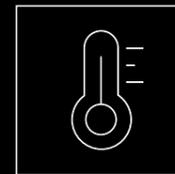

## DRY AGING FISH

**Fish dry aging** is an innovative technique, a new way of **conceiving its consumption**, aiming at the concentration of flavors, the softness of the meat and the exaltation of high quality raw materials.

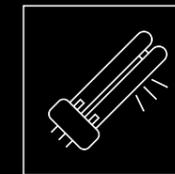

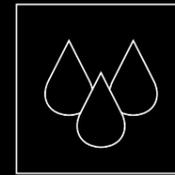

# fish

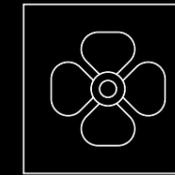

Temperature range  
-2°/ +10°C

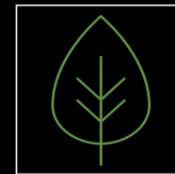

Germicidal UVC LED  
lamp as standard

Humidity adjustment  
range 40% ÷ 90%.  
Water connection not required.

Adjustable ventilation speed

GREEN version with R290 Propane  
Gas also available

## FISHTouch PANEL

Intuitive and easy to use color touchscreen control panel with advanced control functions.

Meatico connects automatically to cloud via Wi-Fi network, allowing to remotely manage operation and parameters of your cabinet

- Controlled parameters for each phase: temperature, humidity, fan speed, phase duration
- Internal temperature and humidity are constantly visualized on display
- HACCP data and alarm recording
- Alarm archive combined with Pop-up warning messages
- Visualization of value average for temperature and humidity as detected during the recipe
